Press Release

ReFrame Successfully Completes Beta Program
Enterprise Software Headed for Release and Enthusiastic Adoption

Cambridge, MA – December 15, 2005 HingePoint™, Inc., the developer of ReFrame™ software – The Interface to Your Business™, announced today that it had successfully completed the beta test program for its innovative enterprise application development software.

"ReFrame allows me to reframe the entire question of software development and delivery from delivering just a few features in a constrained environment to delivering a complete product on a robust, scalable platform," explained Charles Wegrzyn, President of Nyantic, Inc., an independent software developer (ISD) that specializes in enterprise applications that increase operational efficiency by uniting multiple business disciplines through a common user interface.

"ReFrame met all our expectations during the Beta Test Program," said Peter L. Briggs, of Briggs Associates, a leading IT consulting firm that specializes in developing and implementing enterprise architectures and integrated middleware. "We have watched ReFrame evolve from concept through Alpha Testing and now through the completion of the Beta Test Program. ReFrame breaks important new ground in enterprise application development. It creates applications that scale from a single laptop to the largest of enterprises and can be easily modified to accommodate the changes our clients constantly face."

"Nyantic chose ReFrame because it enables us to deliver unique value to our enterprise customers," said Wegrzyn. "They need applications that provide an overall view of how the business is operating and that bring together separate elements of their business processes into a single, easy to understand user interface for their people. Plus, when their business changes they need to be able to change the software and processes they use to run it. ReFrame lets us do a great job of meeting those needs."

"The results of the Beta Test Program further confirm that ReFrame is solidly on track to changing the way enterprise applications are created, deployed, and evolved to help people run their businesses better," said HingePoint's Founder and President Eric Peters. "We are confident of meeting our next milestone, the formal release of ReFrame Version 1.0 in early 2006."

About Briggs Associates
Briggs' Associates has, since 1997, specialized in developing and implementing enterprise architectures and integrated middleware for firms where information is core to the enterprise's functioning. This small company's client industry focus has proven to be research, telecommunications and healthcare. The companies Principals, collectively, have over 75 years of experience in all aspects of software & application development and deployment, and in developing and managing the infrastructures that support them. Briggs Associates is located in Stow, MA.

carrier grade voicemail and auto attendant application based on SIP and VoiceXML. He previously served as Authentica's VP of Advanced Development where he designed the first commercially DRM for email and web content. Mr. Wegrzyn's customer list includes Compaq Computer, Motorola, Codex, Digital Equipment, Data General, Kodak and Honeywell Bull just to name a few. He has worked on projects ranging from network management of the U.S. Treasury Department to designing real-time operating systems. Nyantic is located in Newbury, MA.

About HingePoint

HingePoint provides ReFrame software, The Interface to Your Business™ - an interface that can quickly and easily conform to your business's ever-changing size and shape and that gives you and your people a level of information, communication, and control you've never before experienced. ReFrame is an enterprise application development system that creates a whole new type of application – organic applications – applications that, from their very nature, can adapt to the changing needs and wants of your business. ReFrame includes the key capabilities of: a relational database, programming language, business rules development, an application server, and more.

ReFrame's organic applications provide unparalleled ability to accommodate change. They can scale as large, or as small, as you need them to be. Their workflow, methods, user interfaces, and every other attribute can be easily modified to meet the changing needs of your organization. They can smoothly integrate with your existing software. ReFrame does this through HingePoint's own ActivArchitecture™, a unique combination of: Message-based architecture, and HingePoint-developed LiveObject™ Technology, Object Services™, and Exception handling.

HingePoint is headquartered in Cambridge, Massachusetts and is privately held. For more information please visit www.HingePointInc.com. Press contact: Stevan Vigneaux, Vice President of Marketing at Stevan@HingePointInc.com or 617-995-2223 and fax at 617-995-2224.
